Uncover Oregon’s Ancient Past at the Connley Caves

UO ARCHAEOLOGY FIELD SCHOOL

ANTH 408/508: Archaeology Field Methods
June 22 through July 31 | 8 credits

Archaeologist Dr. Dennis Jenkins helped put Oregon on the Paleoamerican map with his field research at the Paisley Caves - one of the earliest human occupations in the Americas. This summer, he and Katelyn McDonough will teach a six-week archaeology field school at the Connley Caves, a site that has been used by humans for nearly 13,000 years. Students will gain hands on experience in excavation while diving deep into the area’s archaeology, ethnography, and ecology through lectures and discussions. Students will round-out their skills by learning pedestrian surface survey and subsurface testing at Paleoamerican sites in the area led by Dr. Geoffrey Smith of the Great Basin Paleoindian Research Unit.

SPACE IS LIMITED. APPLY TODAY.
